

# UNITED GRINDING

## *EWAG Info*

October, 2005  
EASYGRIND IPR

IPR system automatically applies a dressing stick when grinding pressure exceeds optimal values

## New standard feature makes EASYGRIND up to *30% more productive*

**A**ll EASYGRIND machines come with full-time *in-process regeneration* (IPR). The machine constantly measures grinding wheel pressure, which increases as the wheel loads and its cutting ability decreases. When in-feed and pressure parameters exceed the opti-

mal values, the IPR system automatically “sticks” the wheel. This *reduces grinding time up to 30%* and keeps the wheel grinding freely during long production runs—a must for automated operation.
