Prevent Costly Problems

Can you ever afford to have your machines go down unexpectedly?

On the plant floor, surprises are rarely good. Ensuring you achieve maximum efficiency from your manufacturing equipment is a must and losing the output from a production line due to a failure in one of your machines could be disastrous. Just like taking our cars in for regular maintenance and getting an annual physical for our own health, prevention is the key to avoiding serious problems and maintaining high performance.

Taking a machine down for maintenance can be a tough decision to make, especially when the equipment appears to be working fine. However, the only alternative is to not plan on machine maintenance and to allow your machine to take the decision out of your hands.

United Grinding recommends that you have a preventative maintenance check (PM) performed on your machines every 2000 hours. That means annually for a single shift, every six months for a machine working over two shifts and every four months for a machine operating over three shifts.

Ready to Lend a Hand

What does preventative maintenance mean at United Grinding?

Preventative Maintenance means more than just changing the oil. United Grinding's factory trained and experienced service personnel are ready to help you keep your machines in top operating condition. We can perform testing, alignments, adjustments and performance enhancements for you. United Grinding service technicians can often recognize potential problems that your staff may not and can recommend corrective actions will can minimize future problems and save you repair costs in the long run.

By using our expert staff, United Grinding can provide you with additional services:

Alignment bar checks and adjustments to DIN standards

Replacement of consumable parts

Suggestions for corrective maintenance

ISO compliant PM procedures

An open cardboard box is shown from a top-down perspective, filled with white, irregularly shaped packing peanuts. The box is made of brown corrugated cardboard. A dark grey horizontal bar is overlaid on the left side of the box, containing the text "Delivering Quality" in white. The background is a plain, light-colored surface.

Delivering Quality
