Easy Check software

New measuring software that's so easy you have to see it to believe it — So watch the video!

Measure diameters, step lengths, and angles in seconds

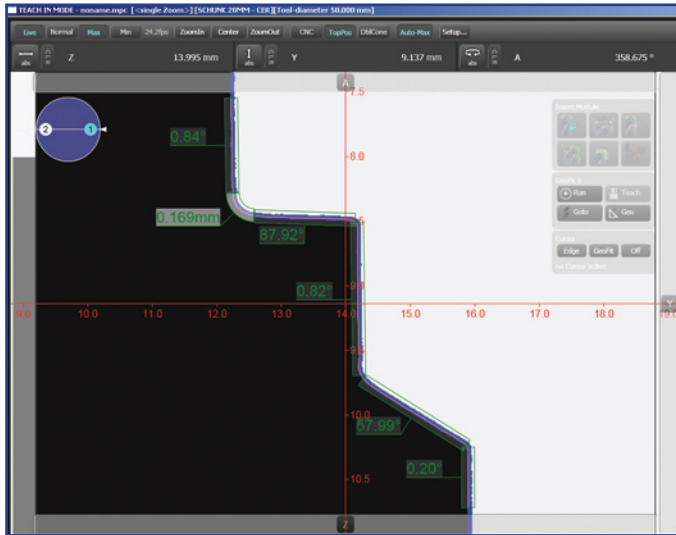

Control all the machine axes with your mouse

Our new *Easy Check* software allows you to create measuring routines directly from the camera's view of the tool, effectively turning any WALTER CNC inspection machine into a more intelligent and convenient alternative to manually-operated optical comparators and presetters. A new "on screen control" feature lets you quickly –yet precisely– control all the machine's CNC axes "live" using the mouse. Just click the mouse to highlight or select the features you want to measure. And you only have to "get close." The software automatically detects the appropriate edges,

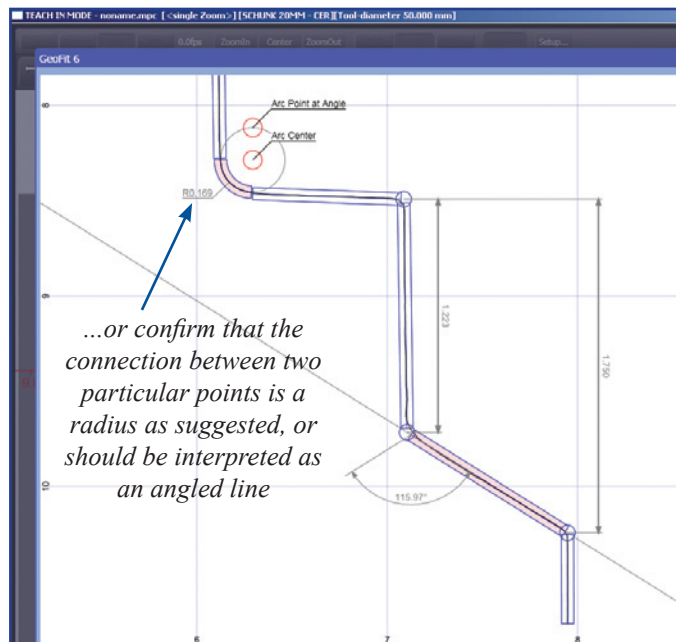

eliminating any operator influence and its inherent inaccuracy. The result is a quick measuring program that's accurate within a few microns. Plus you can save the program and measure additional tools very quickly and efficiently in a fully-automatic cycle.

*Easy Check's profile editor lets you quickly define the measurements you want. For example, you can tell the software to measure multiple step lengths from the same starting point...*

## Your benefits...

- Simple, interactive, intuitive handling. *Any operator* can learn **Easy Check** after a brief introduction
- Precise measuring data helps setup your grinding machines and eliminates scrap
- Eliminates the human influences that affect measuring results on other systems, such as the impact on machine axes when moving them by hand
- Most convenient and precise alternative to manual and in-process tool inspection

## Does **Easy Check** replace **QCM**?

WALTER's **QCM** software is a complete measuring package, including menu-driven programming templates, sophisticated and fully automatic lighting control, final inspection and reporting capability, a QC database, and the ability to export data for SPC and other functions. Plus **QCM** programming can be done off-line on a PC. **Easy Check** is an addition to **QCM** designed for quick set-up and in-process measurements.

## Can you use **Easy Check** on any machine?

**Easy Check** works on any WALTER CNC measuring machine with control version CNC 06 or newer, including machines that have already been installed. Contact our Customer Care team at (540) 898-3700, Ext 1, if you'd like to put **Easy Check** on an existing machine.
