New measuring software

QCM

Helicheck measuring a drill

New measuring software as
easy as “Follow me!”

Heli Toolcheck measuring a
ballnose endmill

- **Easy**—Requires far less training than other tool measuring software. You simply follow a wizard to write a program for all common tool types. Then even an operator with minimal training can measure a tool using this program.
- **Convenient**—One software package handles most common tool types. Quickly measure one tool parameter or all features. You can also setup specific “plans” for your operators. For example, Plan A is always a final inspection, while Plan B is an in-process inspection.

- **Complete off-line setup for higher productivity**—Prepare the measuring program for any type of tool completely off-line on a PC. Your measuring machine stays busy
- **Flexible**—Wizards guide you on most standard tool types. But you also have the flexibility to modify programs or add your own wizards to make special features
- **Run old programs**—You can also run old WALTER measuring programs without exiting *QCM*, and even combine old programs with a new program.
- **Powerful analysis aids**—Create helpful reports, like combining all the measuring results for a given tool
