Upgrade your HMC 500 to run Tool Studio!

Here's an outstanding way to improve your competitiveness: Upgrade your HMC 500 control machines to run the latest software! Helitronic Power and Mini Power machines from 1997-2003 can be upgraded to support current versions of Windows XP, which allows you to run the latest Walter software. (The machine will no longer run the old DOS interface however.) Plus you get other hardware improvements.

Key benefits to upgrading

- Run the latest Walter Window Mode (WWM) and Tool Studio software and grind competitive new tool geometries
- Faster calculations, reducing cycle times and increasing productivity
- Faster navigation through menus
- Improved networking capabilities
- USB interfaces for peripherals like memory sticks or CD burners for data back-up
- Rewired touch probe increases speed and greatly improves tool measurement accuracy

Schedule your upgrade ASAP

One of our field service engineers will have to do the installation and machine configurations varied during the life of the HMC 500. So the next step is to request a quote on **your** machine(s) and then schedule an upgrade. But don't delay! This will be a HOT item.
